

## Charlie's Soap Laundry Booster & Hard Water Treatment

Hard water is a problem. It's tough on pipes, pots and pans and especially your laundry. You know it when you have it: stiff, stained and even smelly clothes. Many laundry detergents are full of carbonates, clays and other chemicals as part of their formula to combat hard water. And that is another problem: normal laundry boosters leave a dingy, stiff and irritating residue on your clothes. Carbonates are used in most laundry detergents, as well as additives and can stay behind in your clothes (even though they appear clean). But they are not necessarily clean.

Charlie's Soap Laundry Booster & Hard Water Treatment uses a biodegradable phosphate that leaves no residue on your clothes while softening your wash water. Certain phosphates can safely eliminate these problems and be environmentally friendly. They're only a problem with overuse.

If hard water is an issue, why not use an environmentally-safe product (ours) rather than take a chance with other detergents that put bad things into the environment? The advantage of using Charlie's Soap with our new Laundry Booster & Hard Water Treatment is that you get the benefit of really clean clothes without a lot of chemicals left behind. The Charlie's Laundry booster and hard water treatment works hand in hand with our Powder or Liquid to give you the best of both worlds.

### To use Charlie's Soap Laundry Booster:

- Do your wash as you normally do with Charlie's Soap
- Add at least ½ Tablespoon of the Laundry Booster & Hard Water Treatment for each dose of Soap.
- As with all laundry additives, you should probably test your fabric for color fastness.
